

Bug ID: DEF-FUNC-001

Summary: The Term field does not accept line breaks during manual Flashcard creation

Module: Document Management – Manual Flashcard Creation

Environment:

- Production build
- URL: <https://language-learning-hub-for-quizz-fro.vercel.app>
- Browser/Device: Google Chrome
- OS: Windows 11
- Date: 2026-09-01

Precondition:

- Learner A owns an empty target Deck (TD-DOC-DECK-001).
- The manual Flashcard creation form is open in the target Deck.

Steps to Reproduce:

1. Open the manual Flashcard creation form in the target Deck.
2. Enter the multiline Term, Meaning, and Example Sentence data from TD-DOC-FC-003 (multiline input).
3. While entering multiline content in the Term field, press Enter.
4. Attempt to submit the Flashcard.

Test Data:

- TD-DOC-FC-003 – multiline Flashcard data.
- An empty target Deck.

Actual Result:

When Enter is pressed in the Term field, focus moves to the next field instead of inserting a line break. The user cannot enter multiline content in the Term field and therefore cannot save a Flashcard with the required multiline Term data.

Expected Result:

1. [UI] The Flashcard is created and all test line breaks remain visible after reopening the editor and reloading the Deck.
2. [DB] The inserted row preserves newline characters in all applicable fields and has the initial SRS state.

Severity: Medium

Priority: Medium

Bug ID: DEF-FUNC-002

Summary: Flashcard fields silently truncate overlength input and allow save instead of displaying validation errors

Module: Document Management – Manual Flashcard Creation

Environment:

- Production build
- URL: <https://language-learning-hub-for-quizz-fro.vercel.app>
- Browser/Device: Google Chrome
- OS: Windows 11
- Date: 2026-09-01

Precondition:

- Learner A owns a target Deck.
- The manual Flashcard creation form is available.

Steps to Reproduce:

1. Open the manual Flashcard creation form in the target Deck.
2. Enter the overlength test data from TD-DOC-FC-004 into all fields:
 - Enter 501 characters in Term.
 - Enter 1001 characters in Meaning.
 - Enter 501 characters in Example Sentence.
3. Attempt to create the Flashcard.
4. Observe the validation messages and the created Flashcard.

Test Data:

- TD-DOC-FC-004 – Term: 501 characters; Meaning: 1001 characters; Example Sentence: 501 characters.
- A target Deck.

Actual Result:

For all three fields—Term, Meaning, and Example Sentence—the application automatically truncates characters beyond the maximum allowed length. No validation error message is displayed for the affected field.

Expected Result:

1. [UI] Each test case is blocked with a length message for the affected field. No success message or new card appears.
2. [DB] No Flashcard row is created and the Deck remains unchanged.

Severity: Medium

Priority: Medium

Bug ID: DEF-FUNC-003

Summary: Flashcard editing allows saving silently and automatically truncated overlength field values without displaying validation errors

Module: Document Management – Flashcard Editing

Environment:

- Production build
- URL: <https://language-learning-hub-for-quizz-fro.vercel.app>
- Browser/Device: Google Chrome
- OS: Windows 11
- Date: 2026-09-01

Precondition:

- The current content, updated_at value, Deck, and SRS state of the owned Flashcard are recorded.
- The saved Flashcard is available for editing.

Steps to Reproduce:

1. Open the saved Flashcard from .
2. Set the fields with overlength data from TD-DOC-FC-004 in the same edit session:
 - Set Term to 501 characters.
 - Set Meaning to 1001 characters.
 - Set Example Sentence to 501 characters.

Test Data:

- TD-DOC-FC-004 – Term: 501 characters; Meaning: 1001 characters; Example Sentence: 501 characters.
- An existing owned Flashcard with recorded initial content and state.

Actual Result:

For Term, Meaning, and Example Sentence, the application automatically truncates characters beyond the maximum allowed length without displaying a validation error message. The application still allows the user to save the Flashcard with the truncated field value.

Expected Result:

1. [UI] Each save is blocked with a length message, and the previous content remains after reload.
2. [DB] The Flashcard row is not updated. Its content, updated_at value, Deck, and SRS state do not change.

Severity: Medium

Priority: Medium

Bug ID: DEF-FUNC-004

Summary: AI generation accepts the Japanese term when the target language is Chinese, and vice versa.

Module: Document Management – AI Flashcard Generation

Environment:

- Production build
- URL: <https://language-learning-hub-for-quizz-fro.vercel.app>
- Browser/Device: Google Chrome
- OS: Windows 11
- Date: 2026-09-01

Precondition:

- The AI Flashcard generation page is available.

Steps to Reproduce:

1. Open the AI Flashcard generation page.
2. Select Chinese as the target language.
3. Enter the mixed valid and mismatched vocabulary data from TD-DOC-AI-003, including ありがとう, Café Study, and 友達.
4. Generate the preview.
5. Compare the generated preview items and failed-item list with the submitted vocabulary.
6. Cancel the preview.

Test Data:

- TD-DOC-AI-003 – mixed valid and mismatched vocabulary data.
- Observed mismatched examples: ありがとう, Café Study, and 友達.

Actual Result:

Mismatch filtering is inconsistent. With Chinese selected as the target language, the system rejects examples such as ありがとう and Café Study, but accepts 友達 and generates a Flashcard preview for it instead of listing it as a mismatched item with a reason. Café Study is rejected when Japanese is selected as the target language. but accepts 是我 and generates a Flashcard preview for it instead of listing it as a mismatched item with a reason

Expected Result:

1. [UI] Valid selected-language items proceed to preview while mismatched/unsupported items are listed with reasons; counts account for every unique submitted item.

Severity: Medium

Priority: Medium

Bug ID: DEF-FUNC-005

Summary: Saving a Flashcard preview to a deleted Existing Deck displays a wrong error message instead of a Not Found message x

Module: Document Management – AI Flashcard Preview Save

Environment:

- Production build
- URL: <https://language-learning-hub-for-quizz-fro.vercel.app>
- Browser/Device: Google Chrome
- OS: Windows 11
- Date: 2026-09-01

Precondition:

- A valid Flashcard preview exists in Session 1, with an owned Existing Deck selected as the save target.
- Session 2 can delete the selected Existing Deck.

Steps to Reproduce:

1. In Session 1, select the owned Existing Deck as the target for the valid Flashcard preview.
2. In Session 2, delete the selected Existing Deck.
3. Without refreshing Session 1, click Save Flashcards.
4. Inspect the displayed notification and reload the Library.

Test Data:

- A valid AI preview and save-target data.
- Existing Deck selected in Session 1 and deleted in Session 2.

Actual Result:

The application does not save the Flashcards. However, it displays the following incorrect notification:

The Existing Deck could not be checked for duplicates. Try again before saving.

The notification does not indicate that the selected Existing Deck no longer exists and does not instruct the user to choose another Deck.

Expected Result:

1. [UI] Save shows Not Found and asks the user to choose another Deck. No success message appears, and the deleted Deck remains absent.
2. [DB] No Flashcard or Deck row is created or restored, and no orphan row exists.

Severity: Medium

Priority: High

Bug ID: DEF-FUNC-006

Summary: Saving a Flashcard preview to a New Deck under a deleted Folder displays an incorrect duplicate-check error

Module: Document Management – AI Flashcard Preview Save

Environment:

- Production build
- URL: <https://language-learning-hub-for-quizz-fro.vercel.app>
- Browser/Device: Google Chrome
- OS: Windows 11
- Date: 2026-09-01

Precondition:

- A valid Flashcard preview exists in Session 1.
- In Session 1, an owned Folder is selected for creating a New Deck.
- Session 2 can delete the selected Folder.

Steps to Reproduce:

1. In Session 1, choose the owned Folder, and select targeted Deck.
2. In Session 2, delete the selected Folder.
3. Without refreshing Session 1, create AI Flashcards and select Save Flashcards.
4. Inspect recovery guidance and reload Library.

Test Data:

- A valid AI preview and New Deck save data.
- A selected parent Folder.

Actual Result:

The application does not save the Flashcards. However, it displays the following incorrect notification:

The Existing Deck could not be checked for duplicates. Try again before saving.

The notification incorrectly refers to an Existing Deck instead of the deleted selected Folder. It does not state that the Folder no longer exists or instruct the user to choose another Folder or create a New Deck under a valid Folder.

Expected Result:

1. [UI] Save shows Not Found and asks the user to choose another Folder. No success message appears, and the deleted Folder remains absent.
2. [DB] No Folder, Deck, or Flashcard row is created or restored, and no orphan row exists.

Severity: Medium

Priority: High

Bug ID: DEF-FUNC-007

Summary: All Deck exports use the fixed filename “deck export” instead of the required normalized Deck name and UTC+7 date

Module: Document Management – Deck Export

Environment:

- Production build
- URL: <https://language-learning-hub-for-quizz-fro.vercel.app>
- Browser/Device: Google Chrome
- OS: Windows 11
- Date: 2026-09-01

Precondition:

- An owned export Deck contains filename-normalization test data.
- The execution can cover the test UTC+7 date boundary.

Steps to Reproduce:

1. For each filename-normalization and UTC+7, export the owned Deck.
2. Inspect the downloaded filename.
3. Compare the normalized Deck-name and date components with the test boundary.

Test Data:

- Filename-normalization and UTC+7 date-boundary test data.

Actual Result:

All exported Deck files use the fixed filename deck export. The filename does not include the normalized Deck name or the UTC+7 date component.

Expected Result:

1. [UI/File] Filename is deck_<normalizedDeckName>_<YYYYMMDD>.xlsx;
Deck name is lowercase with spaces converted to hyphens and unsafe characters removed/replaced, and date uses UTC+7.

Severity: Medium

Priority: Medium

Bug ID: DEF-FUNC-008

Summary: AI input exceeding 3000 characters is silently truncated and allowed to generate a preview without a validation error

Module: Document Management – AI Flashcard Generation

Environment:

- Production build
- URL: <https://language-learning-hub-for-quizz-fro.vercel.app>
- Browser/Device: Google Chrome
- OS: Windows 11
- Date: 2026-09-01

Precondition:

- The AI Flashcard generation form is open.

Steps to Reproduce:

1. Select a supported Target language.
2. Enter the 3001-character from TD-DOC-AI-002, while remaining within 50 unique items.
3. Observe the character counter and click Generate preview.

Test Data:

- TD-DOC-AI-002 – 3001-character vocabulary input with no more than 50 unique items.

Actual Result:

The application automatically removes characters exceeding the 3000-character limit without displaying a validation error. The user can still click Generate preview, and the application generates a preview using the truncated input.

Expected Result:

1. [UI] Generation is blocked with a clear maximum-3000-characters response and no preview is produced.

Severity: Medium

Priority: Medium

Bug ID: DEF-FUNC-009

Summary: AI-generated Flashcards remain blocked by a stale duplicate check after the conflicting Flashcard is deleted in another session

Module: Document Management – AI Flashcard Preview Save

Environment:

- Production build
- URL: <https://language-learning-hub-for-quizz-fro.vercel.app>
- Browser/Device: Google Chrome
- OS: Windows 11
- Date: 2026-09-01

Precondition:

- Two browser sessions can access the same Existing Deck.
- The AI preview initially has no conflict.

Steps to Reproduce:

1. In Session 1, select the Existing Deck and generate Flashcards with AI containing a Term that duplicates an existing Flashcard.
2. Confirm that the preview marks the Term as a duplicate.
3. In Session 2, delete the conflicting existing Flashcard from the same Deck.
4. Without reloading Session 1, click Save Flashcards.
5. Reload both sessions.

Test Data:

- TD-DOC-ACTOR-001 – test actor/session data.
- TD-DOC-AI-008 and TD-DOC-AI-009 – AI-generated Flashcard and save-target data.
- TD-DOC-FC-005 – conflicting existing Flashcard.
- TD-DOC-DECK-001 – Existing Deck.

Actual Result:

After the conflicting Flashcard is deleted in Session 2, the Save Flashcards action in Session 1 remains blocked by the stale duplicate state. Session 1 does not revalidate the Deck data and does not allow the AI-generated Term to be saved. When the page is manually refreshed, Session 1 returns to the AI input screen, requiring the user to select the target language and enter the vocabulary input again.

Expected Result:

1. [UI] Session 1 refreshes or revalidates the Deck data and allows the previously conflicting AI-generated Term to be saved; no stale duplicate error blocks the save.

2. [UI] After reload, exactly one Flashcard with the target normalized Term and the AI-generated content is displayed.
3. [DB] The original conflicting row remains deleted. Exactly one new row exists for the normalized Term, with a new ID and initial SRS values; no duplicate or partial row exists.

Severity: Medium

Priority: High
